

WHITE LIGHTNING™

BINARY EXPLODING RIMFIRE TARGETS

Mixing Instructions:

1. Open COMP A container, using the enclosed scoop, break the lumps into powder. Pour the contents of the Silver Fuel Packets into the COMP A container.
2. Screw on lid, Shake side to side gently, flip container over, and repeat for 1 to 2 mins until thoroughly combined.
3. Remove lid and check to that contents are thoroughly combined, then add 3 level, unpacked scoops of the powder into the WHITE target. DO NOT OVER FILL. A little air space is needed for the target to perform properly.
4. Close the lid on the target. Fold one of the enclosed cardboard holders in half at a 90 degree angle, and insert the target into the slots. Place target no closer than 50 yards away. Now you are ready to shoot. Make sure the area is clear of metal, loose gravel, and any other combustible debris.

TIP: If you are setting up more than one target at a time in your shooting area, use electrical tape to ensure the lid stays shut, so the reaction of the first target does not pop open the other targets.

REMINDER: These targets may start fires. Please don't shoot these targets in a dry grass field or near anything that could easily catch on fire. Bringing a mini fire extinguisher or gallon jug of water. A shovel would be a good idea. Shoot responsibly, and courteously.
